

User Guide

Your experience. Your answers. Real-time interview support.

This guide walks through every feature built so far, with a screenshot of each screen, so you can find your way around before an interview rather than during one.

The one rule this product is built on.

It never invents experience you do not have. Every claim about your background traces back to your resume, a story you wrote, or something you confirmed yourself. Numbers are checked against your evidence before you ever see them. If it cannot support something, it removes it and tells you — or says plainly that you do not have that experience, and bridges to what you do have.

This is the heart of the product. Every fact the Copilot is allowed to say about you lives here, each traced back to where it came from. Green means it came straight from your resume or a story you wrote. Blue means transferable - related experience, not the exact thing asked for. Amber means unverified, and those are deliberately kept out of live answers until you confirm them.

- Filter by status using the tabs.
- Anything marked Unverified will never appear in a live interview answer.

Answer Preparation

Your most recent vendor-side implementation role was at NextGen through 2014, and from 2014 to 2022 you were in a Process Improvement Manager role at IKS Health. How much hands-on EHR implementation and build work have you done since 2014?

15-25 Sec
30-60 Sec
60-90 Sec
Regenerate

Showing your saved answer. Regenerating replaces it and clears any approval.

SAY THIS
Personalized answer

That's a fair read on the timeline. My deepest hands-on build and configuration work — customizing NextGen databases, client-specific workflow configuration, resolving data configuration issues — was at NextGen through 2014, and I'm NextGen Certified from that period. From 2014 to 2022 at IKS Health, the work was process improvement and EMR workflow optimization rather than vendor-side build — things like optimizing EMR workflows that cut data entry errors and standardizing reporting for 60-plus clinicians. Since November 2022 at Ramsey, I've been back in an implementation manager capacity overseeing full-cycle EHR implementations across NextGen, Epic, and Allscripts — planning, training, integration, and post-live stabilization. So recent years have been more implementation leadership than deep configuration, and I'd want to be honest that hands-on eCW build is something I'd be ramping up on.

Answer Grounded in Your Experience — 10 verified fact(s) used

REMEMBER THIS
Glance. Remember. Speak naturally.

OWN THE TIMELINE
Deepest build work = NextGen pre-2014, NCP certified
• verified

2014-2022
IKS = process improvement / EMR workflow optimization, not vendor build
• verified

2022-PRESENT
Ramsey: full-cycle EHR implementations, NextGen/Epic/Allscripts
• verified

BE HONEST
No verified eCW configuration experience — do not claim it
• none

A grounded answer for any question, at three lengths - roughly 15, 30 and 60 seconds. Underneath, the cue cards you would actually glance at, and a note of how many verified facts the answer rests on. Approve one and it is saved.

- Saved answers load instantly - it will not regenerate unless you ask.

Time

02:30 PM

About your interviewer

Their background, how long they have been there, what they seem to care about. Knowing who is across the table changes which of your examples land best.

Clinical background, came from Epic. Ran their last two rollouts herself, so she will push hard on hands-on build detail.

Match score 85% — calculated from the posting, not editable here.

Company research

What you know about them

Recent news, their EHR environment, who you are meeting, why the role is open. This is yours to write - it is not sent anywhere until you use it.

Runs eClinicalWorks across 14 clinics. Role open because the last implementation manager left mid-rollout.

Everything for one interview in one place. The details, what you have found out about the company, the questions you expect, your answers to them, and the buttons to practise or go live. Questions you add yourself are kept separate from the predicted ones, because a recruiter telling you what is coming is better evidence than a prediction. Both lists collapse, so a long set of predicted questions does not bury the rest of the page.

- Add a question button: anything the recruiter mentioned, or that you know this company asks.
- Write your own answer to any question - your own words are the strongest grounding there is, and a saved answer counts as verified experience in later interviews.
- Company research and prep notes are yours; nothing is sent anywhere until you use it.
- Practice This Interview and Start Live Interview both launch already tied to this job.

MOCK INTERVIEW Practice Session

Coaching On Repeat Question End Interview

I'm glad you're taking the time to prepare for your interview. What was your background and what drew you to this Implementation Manager role on our ambulatory EHR team.

At NextGen I was the implementation specialist and the main point of contact from discovery through post-live. I'd assess how the clinic actually worked, build the plan around that, train the Core Team, and travel out for go-live support.

Got it, that's helpful. One thing I noticed though, your resume shows NextGen, Epic, and Allscripts, but not eClinicalWorks. What's your exposure to eCW configuration and build, if any?

At IKS I was the NextGen SME on multi-specialty engagements, so I'd build the implementation plan around how each practice actually ran and customize the system to their workflows.

Okay, so to be direct, have you had any hands-on eCW build experience at all, or would this be a new system for you?

SAY THIS — PRACTISE READING IT ALOUD

Yeah, straight up, eCW isn't a system I've built in. I'm NextGen certified and I've done Epic and Allscripts, but not eCW. So what I'd do early is get into the vendor training and certification path right away and spend the first few weeks in the sandbox actually building, not just reading. And then the part I'd lean on is that the underlying work is the same shape. When I was the NextGen SME I'd sit with a multi-specialty practice, figure out how they actually document and order day to day, and then customize the build around that. So I'd pair with whoever owns your current eCW build, learn how you've configured templates and order sets here, and by 60 to 90 days I'd expect to be building and training on it, not just observing.

Type or speak your answer...

The interviewer asks each question out loud in a female voice, and questions come back in under three seconds so the conversation keeps its rhythm. Coaching On shows a suggested answer under the conversation, grounded in your verified experience, for you to read and practise aloud. Answer by typing or by microphone.

- Repeat Question plays it again without regenerating.
- The speaker icon mutes the voice.
- Say it in your own words - do not recite the suggestion.
- Your microphone mutes automatically while the interviewer is speaking.

LISTENING

Acme Health — Implementation Manager

00:24

INTERVIEWER ASKED

Tell me about a time you had to manage competing project priorities.

SAY THIS

Yeah, so the one that comes to mind is the documentation management work I did across 8 departments. Every department had its own way of handling documentation, and they all wanted their piece fixed first, which meant I was basically juggling eight sets of priorities at once. So I worked with each of them, got a read on where the actual delays were, and sequenced it around that rather than just going in the order people asked. And honestly a lot of it was just keeping everybody in the loop so nobody felt like they'd been dropped. We ended up cutting processing time by 30%. That's pretty much how I've handled concurrent projects generally, I've run multiple implementations at the same time and it comes down to sequencing and communication.

Implementation Manager, Ambulatory EHR — Northshore Medical Group

2.8
Relevance

5.6
Clarity

2.6
STAR

1.6
Metrics

4.6
Job Alignment

Summary

The candidate interviewed for an ambulatory EHR implementation role owning rollouts across a clinic network in an eClinicalWorks environment. They opened with a credible, well-structured description of end-to-end implementation work at NextGen (discovery, onsite assessment, configuration, training, go-live support) and told a strong narrative about salvaging a rejected workflow design before go-live. However, the interview was dominated by the candidate's repeated inability or unwillingness to provide basic sizing data — providers, sites, and timeline — despite being asked three separate times in increasingly direct terms. Each request was met with a deflection to a different topic. The candidate was commendably candid about lacking hands-on eClinicalWorks experience, but when asked a concrete question about a 30-day ramp plan, they again pivoted to unrelated accomplishment metrics. The transcript ends with the interviewer probing the methodology behind a claimed 95 percent efficiency improvement, and the candidate's answer is not captured.

Strong moments

- Clear, structured articulation of the full implementation lifecycle at NextGen: onsite process assessments, tailored implementation plans, database configuration for client-specific workflows, Core Team and end-user training, and coordinating national travel for onsite go-live support — all as the dedicated single point of contact.
- The workflow rejection story was the strongest substantive answer: with clinical leadership rejecting the design roughly two weeks before go-live, the candidate paused the build rather than force it through, ran shadowing sessions to observe actual practice, redesigned three workflows collaboratively with leadership in the room, and renegotiated a two-week phased cutover. Outcome cited: sign-off obtained, live on the revised date, no post-live escalations. This demonstrates stakeholder management and judgment under pressure.
- Direct, unprompted honesty about the eClinicalWorks gap — 'I'd be straight with you: I haven't worked in eClinicalWorks specifically' — paired with an accurate framing of transferable skills and a self-aware request for a defined ramp plan in the first couple of months.
- Named a concrete, verifiable credential (NextGen Certified) and a relevant platform range (NextGen build experience, plus Epic and Allscripts implementations).
- Offered quantified outcomes when describing prior impact: a 22 percent reduction in data entry errors from EMR workflow optimization, and Excel reporting templates adopted by clinical leaders to communicate performance metrics to 60-plus clinicians.

Generated in the background as soon as you end the interview. It covers what went well, what an employer might be concerned about, themes that kept coming up, and anything the employer revealed about the role. A thank-you email is drafted from what was actually discussed. If something was not discussed, it says so rather than inventing it.

- The email can be regenerated in a warmer or more concise tone.

Switch between the light and dark theme from the bottom of the sidebar, or from the top-right of the live interview header so you can change it mid-interview. Your choice is remembered on this machine and saved to your account, so it follows you to another computer.

- Dark mode is worth using for live interviews - during a video call a bright white panel lights up your face.
- The theme applies before the page draws, so there is no white flash when you load the app in a dark room.

Keyboard shortcuts

These work during a live interview, when your hands should be nowhere near the mouse.

KEY	DOES
Q	Quick Glance — strips the screen down to cues only
S	Rebuild the answer in STAR shape
1 2 3	Answer length: about 15, 30 or 60 seconds
R	Regenerate the answer
M	Jump to the box to type a question
P	Pause or resume listening
H	Hide — shrink to Discreet mode
Ctrl + Enter	Send a typed question

Getting the best out of it

Before an interview

- Add the job posting and let the match analysis run — it drives the questions you are asked in practice.
- Read your true gaps and rehearse those answers. They are the questions most likely to catch you out.
- Confirm anything sitting in Needs Review, or it stays out of your live answers.
- Do at least one mock interview out loud. Reading an answer is not the same skill as saying it.

During a live interview

- Glance at REMEMBER THIS, not SAY THIS. Reading a paragraph aloud sounds exactly like reading a paragraph aloud.
- If the audio misses a question, type it — faster than waiting or repeating yourself.
- Use a second screen or Compact mode so you are not visibly reading.

What it will and will not do

It will refuse to invent. Asked for a metric you cannot prove, it says so. Asked about a platform you have not used, it says that plainly and bridges to the closest thing you have actually done. Asked for a dramatic conflict story when your history does not contain one, it will tell you it would rather not make one up. That is deliberate: you have to keep defending whatever it says for the next ten minutes.

- Known limits, stated honestly.**
- It cannot tell your voice from the interviewer's. With one microphone there is no speaker separation, so it may occasionally treat something you say as a question. Press **P** to pause while you talk.
 - Speech recognition is imperfect and will mishear words. Answers are still generated correctly from noisy text.
 - Number checking is automatic and reliable. Narrative checking — people, events, details — relies on instructions to the model, which is a weaker guarantee. If you see an answer describing a person or event you do not recognise, that is worth reporting.
 - Live interviews need Chrome or Edge on a desktop. Voice features do not work in Firefox or Safari.
 - Resume analysis takes a minute or two, and the post-interview report about forty seconds. Both run in the background so you are never stuck waiting on a frozen screen.

If something goes wrong

WHAT YOU SEE	WHAT TO DO
Credit balance is too low	Add credits at console.anthropic.com under Plans & Billing. Turn on auto-reload so it cannot happen mid-interview.
Nothing happens when you speak	Check the header says LISTENING and that the browser has microphone permission. Type the question as a fallback.
Analysis stopped unexpectedly	The server restarted mid-job. Press the retry button on the card.
The voice sounds robotic	Windows Settings → Time & Language → Speech → Add voices. Install Aria or Jenny; they are picked up automatically.
An answer mentions something you do not recognise	Report it. Narrative grounding is the weakest guarantee in the system, and that is the failure mode to watch for.
